

To give a grid reference, eg for the Scout Hall, first read what grid line is to the left of the Hall using the bottom scale ('040'), then estimate how many tenths to the right to the Hall ('7 tenths'). This locates the East/West position of the Hall at '047'. Next read what line is below the Hall using the RH scale ('020') and estimate how many tenths there are above to the Hall ('8 tenths'). This locates the the North/South position of the Hall at '028'. The full grid reference for the Hall is therefore '047028'.
